FENG SHUI

The practice of Feng Shui revolves around the abstract concepts of 'Qi', which literally means 'breath' in Feng Shui. 'Qi' is referred to as an intangible energy that exists in everything and everywhere. There are the good 'Qi' (Shen Qi) and the bad 'Qi' (Sha Qi). These 'Qi' have profound or adverse effects on our wellbeing.

Imagine every entity emitting its own 'Qi' or life force, be it human, animals, plants, the environment or any inanimate objects. These entities can either be 'Yin' or 'Yang' in essence and it is through the years of practice and study that their core constituents are determined. For Feng Shui to unleash its efficiency, all elements must be in harmony and balance.

Today, people are more conscious of the benefits in Feng Shui in our everyday lives. Decisions today are made to harness the best effects of the good 'Qi', be it in business, family and the home, buying a property, renovating homes, colors and material used in the environment.
